No. Only top-level bases should be managed by XMANAGER.

- > Another question: if I use a base (that isn't top level) as a group leader to
- > a widget top level, will it work?

There are no restrictions as to which widgets can be group leaders for other widgets. When the group leader dies (even if it is not a top-level base), the members of the group die as well. Group leaders are *\*normally\** top-level bases, since it is odd to be killing off widget sub-hierarchies. In fact, I would suggest you better have a VERY good reason for doing so, or you are likely to get into some kind of trouble. :-)

Cheers,

David
