Does anyone know if IDL has topographical datasets? I need to display the elevation information over the map.

Thanks.

IMO IDL has no elevation dataset available. I received an elevation data set from the eros data center <http://edcwww.cr.usgs.gov/landdaac/gtopo30/gtopo30.html> (GTOPO30 is a global digital elevation model (DEM)) some time ago on 5 CDs with whole world coverage. For this data set I wrote a little IDL tool to read the files and to plot them using IDL.

Theo
