I am looking for an IDL procedure that generates a structure tree or hierarchy of procedures and functions for a set of IDL units residing in one or more directories. I have a similar tool that used to work under PV-WAVE (gen_tree.pro by Wouter van der Beek), but I can't get to to work in IDL, and I can't find it (so far) on the WWW. Thanks for any help!

John;

Do you have any sample output/code that might give us a better idea of what you're looking for?

Phillip
