
Subject: Check mark on menu bar pull down item?

Hello IDL folks,

I have looked through the documentation for IDL 5.1 and can't seem to find any mention of how to display a check mark next to a pull down item from a menu bar. It looks like IDL leaves room on the left of menu bar pull down items for this purpose, but I can't figure out how to implement it. I hope this is possible because it would be a lot slicker than having to use check boxes in the main widget area to indicate that certain options are on or off.

As always, thanks in advance for any help!
