Dear Friends in IDL:

Three ugly error messages occurred today while someone was using a large program that I've written in IDL. According to the user, there was nothing in particular she was doing at the time to cause these errors: they appear to happen randomly. I have no idea where to start tracing down these errors. ANY suggestions would be helpful. (By the way, this program was being executed from an NDC x-terminal and the program was using IDL version 3.0 on a DEC Alpha AXP machine running under OpenVMS 1.5.) The program relies heavily on Widgets.) I've cut and paste the output below.

(The first one today happended at about 2:15 PM)

```
IDL> lidp,'aa203zuvfa.oo4','aa2_o3_nd',3,1,750
% Compiled module: LIDP.
