
Subject: Some functions for statistics

Dear all,

I've got some pretty nice statistics to do, and would like to do it in IDL, but after looking in documentation, searching archives and dejanews and asking people, it seems IDL doesn't have quite what I want.

I'm looking for functions that can give me things like confidence intervals for a particular situation, p-values for testing whether linear regression coefficients are significantly $\neq 0$, and so on.

There is a pretty straightforward relationship between hypothesis testing and confidence intervals, so it shouldn't be difficult to do with IDL's routines for hypothesis testing, and I might do it myself.

Before I start, I figured I would ask if someone has already done it, and would like to share their code. I would be grateful if someone would like to share it with me.

Best,

Kjetil
