Does anyone have any experience with IDL under OS2.1? I assume that this is the only way to multitask IDL on a PC?

Thanks, Jayant Murthy

I found the same error with IDL 3.5.1 and the absence of the error with IDL 3.1.1. The error is cured if you apply the CSD to OS/2 2.1 to bring it up to OS/2 2.11. Otherwise, you can use 3.1.1.
