Hi,

How is it possible to generate an event when the user enters some characters in a widget_text or when the focus change of widget_text?

With the small following example, I can catch only the Carriage Return key

```
pro test_event, event
  print, event
end
pro test
  w=widget_base( /COLUMN, /KBRD_FOCUS_EVENTS)
  item1 = widget_text(w, value='1', /EDITABLE)
  item2 = widget_text(w, value='2', /EDITABLE)
  widget_control, /REALIZE, w
  xmanager, 'test', w, /JUST_REG
end
```
