Howdy, I would like an effecient way to insert a row or observation in a structure. The structure is simple like:

```
data = {data1,num:0L,x:0.0,y:0.0,z0.0}
```

```
dataout = Replicate(data,100000L)
```

I will have to insert, and at other times append, rows into dataout.

thanks for any ideas,

Joe
