Subject: concat of %1 to a sav file
Posted by R.Bauer on Tue, 16 Mar 1999 08:00:00 GMT

Hi,
using NT 4.0 I have a question about runtime sav files.

I have already saved a routine as precompiled sav file.
I have added an extension to a batch file which forwards the file name
over a file to the sav routine.

batch file:

echo %1 > C:\temp\kryptisch
s:\links\idl_source\idl_precompiled\display.sav

This all is working.

I like to have a directly forwarding of the clicked file name to the sav
routine without the batch file.

How can I do this?
