Hi,

we want to use the VDA Tool WzPlot to display many curves with different peers X/Y.

Has someone already modified the wave code of this tool to enable this functionality ???

The functions to modify should be : WzPlotDisplay, WzPlotBuildCommand, WzPlotCodegen, WzPlotAddvar.

The implementation could be :

WzPlot, Y1, Y2, independant_1=X1, independant_2=X2

Thanks for your help,
best regards.
