
Subject: Need an "atom" object

Hi Folks,

I'm trying to save myself a bit of time and help out a friend at the same time. We are looking for some kind of "atom" object that would be a sphere with a particular color and radius. It might have its own light source associated with it. The idea would be to clump these atoms together into a rotatable "molecule", if you like.

I believe I know how to make such a thing, but I'm busy getting ready for an IDL class and would prefer to spend my evenings doing other things. :-)

Any help would be greatly appreciated.

Cheers,

David
