I haven't tested this, but if you set the RETURN_ID keyword, you will get the ID of the selected button back in the VALUE field of the event handler. You could store this value as the current selection:

```
info.current_selection = event.value
```

Then, when you wanted everything to be insensitive, you could do something like this:

```
Widget_Control, info.current_selection, Set_Button=0
```

Cheers,

David
