Hi!

I have a problem with teh POLY_NORM function.

The System Variable !xs is set to (0,0) so that all coordinates i want to chnage with teh poly_norm function are ste to zero. How can i change the variable !xs or d i have to create a coordinate system befor using the Poly_norm function?

Thanks for Your help.

Rainer.

POLY_NORM must be a locally-written function. It's not available in the normal IDL distribution. There is, by the way, a HUGE fee for debugging someone else's code. :-)

Cheers,

David
