Hi forks,

I implement a dialog with radio buttons, but I don't know to get their states (checked or not).

Could you give me an advice ?

Thank you for help,

Tri.

> send me this exaple code

The code for bitwise setting / checking can be found in the file

http://spot.colorado.edu/~romashki/idl/hc_checkbox.pro

Again, notice that in many cases, when you use

`MY_CBs = CW_BRGOUUP(parent, ..... /NONEXCL)`

then calling `WIDGET_CONTROL, MY_CBs, get_value=cb_state`

places a vector of button states in the `cb_state` variable. I found this to be not flexible enough, and I like the ability of 1-line IF-checking with `hc_checkbox.pro`

Cheers,

Pavel
