Ewan,

Thanks for your read/write routines; I plan to experiment with them under IDL as they seem pretty compatable. A couple of 'dumb' questions though: 1) Are the terms 'riff' and 'wav' interchangeable? 2) Do you (or anyone else) know of a means to send a WAV file to a PC audio card from within IDL? I suspect it's gonna have to be an external-C module-arrangement which, unfortunately, I haven't tried yet. In the interim, I'm using the 'beep' function which was just posted in this group.

Thanks,

Bill B.

For reading and writing wav files, you can use the PV-WAVE routines, riff_read.pro & riff_write.pro available from my web page.

No. WAV is a type of RIFF file. RIFF is sort of a "meta format", so the names of those routines unfortunately promise somewhat more than they deliver. Previous, less-functional versions of those routines were called WAV_READ and WAV_WRITE, hence the (perhaps ill-advised) name change.

2) Do you (or anyone else) know of

Could your write out the WAV file and then spawn the Windows Media Player?

Isn't it about time IDL and PV-WAVE provided native support for WAV files and soundcards? Matlab finally got around to it, although you still can't record.
