Thanks for some ideas,

I was thinking more about a function like reform_struct.

The most reason why I am needing a function like this is that I have learned that's widget_table is very fast if I use a vector of structures instead of a string array.

To start the discussion again about an editor widget for structures this routine is usefull.

```
data={a:findgen(10),b:sin(findgen(10))}  
result=reform_struct(data,10,/struct_array)
```

```
xvaredit,result
```

;   reform_struct  
;  
; PURPOSE:  
;   This function is used to reform a structure  
;  
; CATEGORY:  
;   PROGTOOLS/STRUCTURE  
;  
; CALLING SEQUENCE:  
;   result=reform_struct(structure,dim1,[dim2],[dim3],[dim4],[di
```

```

m5],[dim6],[dim7],[dim8],[/struct_array],[/tag_array]
;
; INPUTS:
;   structure: a structures
;   dim1: the new dimension of the input structure (1D to 8D)
;
; OPTIONAL INPUTS:
;   dim2 to dim8: additional dimensions if not declared in dim1
;
; KEYWORD PARAMETERS:
;   struct_array: if is set output structure is an array
;   tag_array: if is set output structure is 1D and tags are arrays
;   You have to set one of these keywords
;
; EXAMPLE:
;   data={a:findgen(10),b:sin(findgen(10))}
;   result=reform_struct(data,2,5,/struct_array)
