Anyone seen this error? It's a new one on me.

% Array has a corrupted descriptor: H.

I am working on a 1024x1024 image, and h is a histogram, which can be computed several times before the error pops up.

No, it's during use of the histogram function. Apparently others have seen it using histogram under Windows. RSI is aware of the bug (which is likely a more general memory corruption issue), and it will be fixed under 5.2.1, which I was just informed by RSI will come out within the month.

Yes, I see it after a call `_external` in returned variable.Is it your situation?

I found it too but only on my AIX idl

The same routine on idl for Windows works good.

I have used structures.
