Subject: IDL's ActiveX DrawWidget in Visual Basic

Does any one know how to alter the RegisterForEvents method? I want to
be able to switch between having IDL handle mouse events for certain
areas and have Visual Basic handle events for other things. For example
I want to have IDL handle events when I have a button pushed in Visual
Basic but have VB handle mouse events when the button isnï¿½t pressed. As
of right now it seems to be an all or nothing situation. If I assign a
value to the .OnButtonPress property I canï¿½t set the RegisterForEvent
method. Any help you can provide would be greatly appreciated. I am
using IDL 5.2 and Visual Basic 6.0.

Brian
