I apologize if this question has been addressed before, I don't read this
group often and didn't notice an FAQ, so here goes. I want a greyscale
ramp that goes from white to black. If I load color table 0 and
tvscl a data array, I get a ramp that goes from black to white. I attempted
loading color table 0 and then doing a rotate(color,2) to reverse the
color scheme, and that appeared to work but when I created a PostScript
version of it, the black to white scale reappeared. Can anyone help?
