Subject: Passing zero as a Parameter/ NOT KEYWORD\_SET

How can I pass the number zero as a parameter, without the function/subroutine thinking that the parameter is not set?

For example:

```
;code
pro bob, in=in, out=out
if keyword_set(in) then out=in+200
end
```

;pretend sample runs

```
#1... I want the number 201
IDL>bob,in=1,out=out
IDL>print,out
201
```

```
#2...I want the number 200
IDL>bob,in=0,out=out
IDL>print,out
%PRINT:Variable is undefined: OUT.
%Execution halted at: $MAIN$
```

Also, why does:

IF NOT KEYWORD\_SET(keyword) then do-this-stuff

not work?

I've had to do the following:

IF KEYWORD\_SET(keyword) then a=a else do-this-stuff

("a=a" acts as some kind of dummy variable thing.)
