I recommend this style guide - not as a course in how to program, but as a set of guidelines on how to ensure that you and your colleagues can understand next year, what you wrote this year.

Before I go tilt at another windmill, let me suggest an IDL Style Guide that I put together earlier this year. It was written about 4 years ago, but cleaned up and put on the web in January. It's available at <http://www.ivsoftware.com/IDL_Style.html>. I'd like to get some feedback to make it an acceptable document for others to use, as well.
