Dear IDL group-

I'm using ENVI 3.1/IDL 5.1 and would like to set pixel values of 0.0 to NaN in order to carry out some analyses without including 0.0 values. Is there an easy way to do this with the Band Math function of ENVI, or is there a quick and dirty IDL solution?

Thanks for any help

Sincerely,

Mark Amend

Is there a way to do this without band math? I just need to assign null value pixels (-999) to NaN and want to do it using the GUI.... would really appreciate any help!
